

Peter Angelo Dantes | Data Scientist

Candelaria, Quezon Province, Philippines · 09762741947 · petergelodantes@gmail.com

PROFILE	Graduated as Summa Cum Laude, I am a BSCS Data Science major with hands-on experience as a data scientist, earning 3rd Place in BPI DataWave 2024 and Top 5 in GDSC InnOlympics for end-to-end ML solutions. I've led projects from raw data to deployment-ready models, dashboards, and real-world forecasting/analytics pipelines. I also keep track of the latest AI technologies that innovate data analysis, using automation products, CLAUDE/OpenAI frameworks and skills, and other methodologies to turn real-world data into decision-ready insights for clients, industries, and communities.
---------	--

PROFESSIONAL EXPERIENCE

January - May 2026	Software Engineer: InsightQ Consulting Group	Software Engineer Intern
	- Leveraged Agentic Development and Engineering workflow to develop and ship ERP products and custom software for the company. - Developed software solutions and ERP products for various clients, sectors, and industries, bringing digitalization to businesses and companies across the country.	

CERTIFICATION

January 2026	Pearson IT Specialist - Data Analytics	Certiport
	- Validated my knowledge on manipulating, analyzing and communicating data analysis findings. - An entry-level credential designed to support foundational data skills by Pearson.	

RELEVANT EXPERIENCE (COMPETITIONS)

Oct 2025	Data Scientist: Philippine Junior Data Science Challenge (PJDSC), UP Data Science Society	Competitor
	Segmented streets (geospatial) data and implemented the analytics pipeline into a web-deployed solution, transforming raw model outputs into interactive data storytelling experience via storymaps to motivate LGUs and planners in improving climate resilience for vulnerable communities.	
Jan 2025	Technical & ML/Product Lead: GDSC InnOlympics, Google Developer Students Club (GDSC)	Top 5
	- Led the ideation and scoping phase: mapping out user pain points, translating them into clear problem statements, and filtering ideas based on feasibility, impact, and technical complexity. - Defined the high-level architecture, breaking the solution into modular components, and ensuring that the technical choices aligned with the user journey we wanted to deliver. - Connected technical details to user outcomes, crafted the structure of our pitch, and supported the team during Q&A by explaining trade-offs, future improvements, and scalability.	
Dec 2024	Data Scientist: BPI DataWave – Machine Learning Track, BPI x Eskwelabs	Top 3

- Led the process of understanding the business context, breaking down the challenge into concrete ML tasks, and translating BPI's objectives into measurable metrics and model targets.
- Bridge the gap between data science and product storytelling: ensuring that every technical choice served a clear purpose, that our results could be trusted and interpreted, and that our prototype felt like a realistic step toward deployment, contributing to our 3rd-place finish in the track.

EDUCATION

2022 — Present	BS Computer Science, Manuel S. Enverga University Foundation	Lucena City
	• Graduated Summa Cum Laude with the specialization track of Data Science. I am proficient in turning problem statements into data-driven solutions. I am a consistent University Scholar and Dean's Lister, bridging technology and real-world problems using data science solutions.	
Jun 2022	STEM, Southern Luzon State University – Laboratory School	Lucban, Quezon
	• Graduated with High Honors.	

NOTABLE PROJECTS

Jan 2025 — Nov 2025	Clinician-Assistive AI System for Psychological Diagnosis Support Using Retrieval-Augmented Generation (RAG) and Speech Emotion Recognition (SER)	Thesis
	• Designed and implemented the full Speech Emotion Recognition pipeline for this thesis, from window-level prosodic feature extraction and GMM-based SER modeling to RAG-ready text construction, knowledge-base retrieval, and LLM-powered recommendation prompts, focusing on clinical workflow, interpretability, and bias mitigation.	
Sept 2025 — Oct 2025	Project SBAFN: Street-based Assessment for Flood-prone Neighborhoods	Philippine Junior Data Science Competition (PJDSOC)
	• Geospatial data science lead for Project SBAFN, a street-level flood-proneness mapping system for Philippine neighborhoods to support evidence-based planning and disaster preparedness. • Segmented streets (geospatial) data and implemented the analytics pipeline into a web-deployed solution, transforming raw model outputs into interactive data storytelling experience via storymaps to motivate LGUs and planners in improving climate resilience for vulnerable communities.	
Jan 2025	DashGov	GDSC InnOlympics
	• Lead data product builder for DashGov, a governance analytics dashboard that turns fragmented public-sector data into clear, actionable metrics for decision-makers. • Designed the data model and pipeline and implemented interactive dashboards that track project performance, budget utilization, and service outcomes in a way that supports transparent, evidence-based governance.	

TECHNICAL SKILLS

Python	Data Visualization – Power BI
Data Analysis (Pandas, NumPy, etc.)	Web Deployment

MICROCREDENTIALS

Nov 2025	Applied Statistics for Data Analytics, DeepLearningAI Coursera
Sept 2025	Unlocking Business Insights through Storytelling with Data, Coursera Instructor Network
Jun 2025	Specialized Models: Time Series and Survival Analysis, IBM Coursera
May 2025	Introduction to Retrieval Augmented Generation (RAG), Duke University Coursera
