

Peter Angelo Dantes | Data Scientist

Candelaria, Quezon Province, Philippines · 09762741947 · petergelodantes@gmail.com

PROFILE

Data Science BSCS student with hands-on experience as a data scientist, earning 3rd Place in BPI DataWave 2024 and Top 5 in GDSC InnOlympics for end-to-end ML solutions. I've led projects from raw data to deployment-ready models, dashboards, and real-world forecasting/analytics pipelines. Driven to turn real-world data into decision-ready insights for high-stakes domains like healthcare, finance, and public sector analytics.

RELEVANT EXPERIENCE (COMPETITIONS)

Oct 2025	Data Scientist: Philippine Junior Data Science Challenge (PJDSC), UP Data Science Society Led the data-driven segmentation of streets and implemented the analytics pipeline into a web-deployed solution, transforming raw model outputs into interactive data storytelling experience via storymaps for LGUs and planners. Motivated to turn complex, multi-source spatial data into intuitive, decision-ready tools that improve climate resilience for vulnerable communities.	Competitor
Jan 2025	Technical & ML/Product Lead: GDSC InnOlympics, Google Developer Students Club (GDSC) Served as the team's primary strategic and technical lead, responsible for turning a vague, ambitious problem space into a focused, buildable solution. Early on, I led the ideation and scoping phase: mapping out user pain points, translating them into clear problem statements, and filtering ideas based on feasibility, impact, and technical complexity. On the execution side, I took charge of the system design and core implementation. This included defining the high-level architecture, breaking the solution into modular components, and ensuring that the technical choices aligned with the user journey we wanted to deliver. Beyond coding, I played a key role in storytelling and pitching. I helped frame the narrative around the problem we were solving, why it mattered in the real world, and how our solution stood out from typical student projects. I connected technical details to user outcomes, crafted the structure of our pitch, and supported the team during Q&A by explaining trade-offs, future improvements, and scalability. Overall, my role was to anchor the team's creativity in a coherent, technically sound, and pitch-ready product concept, contributing to our Top 5 finish in the competition.	Top 5
Dec 2024	Data Scientist: BPI DataWave – Machine Learning Track, BPI x Eskwelabs Turned an open-ended problem statement into a working, data-driven solution. I led the process of understanding the business context, breaking down the challenge into concrete ML tasks, and translating BPI's objectives into measurable metrics and model targets. Ultimately, my role was to be the bridge between data science and product storytelling: ensuring that every technical choice served a clear purpose, that our results could be trusted and interpreted, and that our prototype felt like a realistic step toward deployment—contributing to our 3rd-place finish in the track.	Top 3

EDUCATION

2022 — Present	BS Computer Science, Manuel S. Enverga University Foundation Taking the specialization track of Data Science. I am proficient in turning problem statements into data-driven solutions. I am a consistent University Scholar and Dean's Lister, bridging technology and real-world problems using data science solutions.	Lucena City
Jun 2022	STEM, Southern Luzon State University – Laboratory School Graduated with High Honors.	Lucban, Quezon

TECHNICAL SKILLS

Python	Data Visualization – Power BI
Data Analysis (Pandas, NumPy, etc.)	Web Deployment (Vercel, AWS)

NOTABLE PROJECTS

Jan 2025 — Nov 2025	Clinician-Assistive AI System for Psychological Diagnosis Support Using Retrieval-Augmented Generation (RAG) and Speech Emotion Recognition (SER) Designed and implemented the full Speech Emotion Recognition pipeline for this thesis, from window-level prosodic feature extraction and GMM-based SER modeling to RAG-ready text construction, knowledge-base retrieval, and LLM-powered recommendation prompts—with a strong focus on clinical workflow, interpretability, and bias mitigation. Motivated to turn raw multimodal data (audio + text) into transparent, clinician-first decision support for high-stakes mental health settings.	Thesis
Sept 2025 — Oct 2025	Project SBAFN: Street-based Assessment for Flood-prone Neighborhoods Geospatial data science lead for Project SBAFN, a street-level flood-proneness mapping system for Philippine neighborhoods to support evidence-based planning and disaster preparedness. I led the data-driven segmentation of streets and implemented the analytics pipeline into a web-deployed solution, transforming raw model outputs into an interactive data storytelling experience via storymaps for LGUs and planners. Motivated to turn complex, multi-source spatial data into intuitive, decision-ready tools that improve climate resilience for vulnerable communities.	Philippine Junior Data Science Competition (PJDSOC)
Jan 2025	DashGov Lead data product builder for DashGov, a governance analytics dashboard that turns fragmented public-sector data into clear, actionable metrics for decision-makers. I designed the data model and pipeline, defined KPIs with stakeholders, and implemented interactive dashboards that track project performance, budget utilization, and service outcomes in a way that supports transparent, evidence-based governance. Motivated to use data storytelling and intuitive visual design to make complex civic data understandable and useful for non-technical users.	GDSC InnOlympics

MICROCREDENTIALS

Nov 2025	Applied Statistics for Data Analytics, DeepLearningAI Coursera
Sept 2025	Unlocking Business Insights through Storytelling with Data, Coursera Instructor Network
Jun 2025	Specialized Models: Time Series and Survival Analysis, IBM Coursera
May 2025	Introduction to Retrieval Augmented Generation (RAG), Duke University Coursera
